### NMFS Announces a Proposed Rule to Adjust Quotas, and Establish Fishing Seasons in the Large Coastal Shark, Small Coastal Shark, and Pelagic Shark Fisheries

The National Marine Fisheries Service (NMFS) proposes to adjust the 2007 second and third trimester season quotas for large coastal sharks (LCS), small coastal sharks (SCS), and pelagic sharks based on over- or underharvests from the 2006 fishing season, and announces proposed season opening and closing dates for the second and third trimester seasons of 2007.

During the second trimester season of 2006, the South Atlantic region landed 167 percent of their LCS quota and 22.4 percent of their SCS quota, the Gulf of Mexico region landed 171 percent of their LCS quota and 206 percent of their SCS quota, while the North Atlantic region experienced underharvests for both LCS and SCS. During the third trimester season of 2006, the South Atlantic region landed 216 percent of their LCS quota and 15.2 percent of their SCS quota, the Gulf of Mexico region landed 156 percent of their LCS quota and 75 percent of their SCS quota, while the North Atlantic region experienced overharvests for LCS (176 percent of their quota) and underharvests for SCS.

The preferred alternatives seek to address the ecological and social/economic ramifications of an extensive overharvest experienced in the South Atlantic and Gulf of Mexico regions by merging the LCS 2007 second and third trimester seasons to provide longer seasons and thereby increasing fishing opportunities consistent with available quotas and splitting the regional SCS quota allocation between the South Atlantic and Gulf of Mexico regions to avoid future overharvests.

LCS proposed season lengths and quotas for the 2<sup>nd</sup> and 3<sup>rd</sup> trimester seasons of 2007
