

Atlantic Shark Commercial Fishery Update

Below are the preliminary landings estimates in metric tons (mt) and pounds (lb) dressed weight (dw) for the Atlantic Shark commercial fisheries January 1, 2009, through October 31, 2009. Most of these preliminary landings estimates include landing reports received through October 31, 2009; some estimates include landing reports received through November 15, 2009. The landings presented below are total landings reported through the Pelagic Dealer Compliance (PDC) (previously known as the Quota Monitoring System), and the Accumulated Landings System (ALS) (previously known as the general canvass). Landings within the shark research fishery were determined from trip tickets provided to the National Marine Fisheries Service (NMFS) by scientific observers. The estimates include landings by state-only permitted vessels, federally permitted vessels, and the 2009 shark research fishery participants. Due to the privacy regulations of North Carolina (NC), NMFS is unable to remove all instances where NC dealers report in both the PDC and ALS. As a result, some NC landings may be inflated. NMFS reminds fishermen and dealers that they are required to identify all landed sharks to species.
