

Atlantic Shark Commercial Fishery Update

Below are the preliminary landings estimates in metric tons (mt) and pounds (lb) dressed weight (dw) for the Atlantic Shark commercial fisheries from **January 1, 2010, through August 31, 2010**. Most of these preliminary landings estimates include landing reports received through September 15, 2010; shark research fishery estimates include landing reports received through September 20, 2010. The landings presented below are total landings reported through the Pelagic Dealer Compliance (PDC), and the Accumulated Landings System (ALS). Landings within the shark research fishery were determined from trip tickets provided to the National Marine Fisheries Service (NMFS) by scientific observers. The estimates include landings by state-only permitted vessels, federally permitted vessels, and the 2010 shark research fishery participants. Due to the privacy regulations of North Carolina (NC), NMFS is unable to remove all instances where NC dealers report in both the PDC and ALS. As a result, some NC landings may be inflated. **NMFS encourages fishermen to avoid blacknose shark catch in order to keep the non-blacknose SCS fishery open as long as possible.**

Species Group	Region	Season Opening Dates	2010 Quota	Estimated Landings	% of Quota
Non-Sandbar Large Coastal Sharks	Gulf of Mexico	February 4 (Closed: Mar 17) †	390.5 mt dw (860,896 lb dw)	419.0 mt dw (923,780 lb dw)	107.3%
